Abstract - This paper provides a comprehensive study of omnidirectional vision technology. Omnidirectional technology refers to devices or systems that can detect, transmit, or receive signals in all directions. This technology is widely used in various fields, such as telecommunications, robotics, and multimedia. Omnidirectional technology can enhance wireless communication, navigation, and sensing efficiency and accuracy. Omnidirectional vision and cameras are critical components of omnidirectional technology, enabling devices to operate and interact with their environment more comprehensively and efficiently. This paper presents a complete study on omnidirectional vision, omnidirectional images and a comparative investigation of omnidirectional camera systems and other camera systems by highlighting omnidirectional vision's unique benefits. Based on the investigations, this paper provides solutions to the privacy issues in omnidirectional cameras using the proposed privacy-preserved omnidirectional Camera (PPOMDC) algorithm. Overall, the paper offers a

Abstract. Wireless sensor networks (WSN) equipped with machine learning algorithms and the LEACH (Low energy adaptive clustering hierarchy) protocol play a critical role in detecting and preventing forest fires, helping to protect the environment, and promoting sustainability. By deploying sensors throughout a forest, it is possible to monitor for temperature changes, smoke, and other

Abstract: Image annotation plays a crucial role in computer vision by facilitating the training and development of accurate object detection models. However, the conventional manual annotation process is time-consuming and labor-intensive, prompting the exploration of automated techniques. This research paper focuses on the application of Artificial Intelligence and Machine Learning (AIML) techniques for image annotation, specifically in the context of object detection. In this we evaluate and compare the effectiveness of various AIML techniques, including deep learning-based approaches such as Convolutional neural networks (CNNs), Recurrent neural networks (RNNs), and Generative adversarial networks (GANs). To conduct this evaluation, we utilize the KITTI dataset, a widely used benchmark dataset in the field of computer vision. To assess the performance of the different models, we employ standard evaluation metrics such as precision, recall etc.. These metrics provide insights into the accuracy and consistency of the annotations generated by the models. The findings of this study are expected to contribute to the development of more efficient and accurate object detection systems. By identifying the most effective AIML techniques for image annotation, researchers and

ABSTRACT

In the most recent period, the discipline of Analyzing the emotions expressed on Twitter has grown rapidly, with several studies supporting the utilization of algorithms based on machine learning techniques to analyze tweets and extract user sentiments about a certain subject. This work intends to do a comprehensive analysis of the emotional tone of tweets by making use of ordinal regression as well as other machine learning approaches. Following the completion of the preprocessing of the tweets, the

Abstract— Even in older people and those who lead unhealthy lifestyles, heart disease may be a common problem that can be quite serious. This project's primary goal is to take action and decrease the prevalence of middle diseases in patients. Age, sex, sign, number of cigarettes smoked per day, and other medical data are used as inputs, and these features are then modelled for prediction. Abstract One of the most challenging issues in the medical industry

are achieved. These methods are outlined in the following. ML algorithms that are studied in detail and that may be applied to various cardiac conditions algorithms for decision trees, KNN, and K-Means may employed different types of problems were reviewed in the research and their delicateness. Investigation identifies the decision tree's as being level of delicacy was the highest. and it has been deduced that this level of delicacy is

Abstract. Photographs play an important role in everyone's life – they connect us to our past, they remind us of people, places, feelings, and stories. They can help us to know who we are. Hiring a photographer or searching for a desired artist is a time-consuming task these days. One must go to the so-called studio of the photographer and ask for the details and check for his availability. Every photographer may not be specialized in every aspect. Thus, the customer may be compromised in such situations. In order to satisfy the customer in every aspect, we want to create a medium where the customers can hire the desired photographer at their fingertips. We want to create a user-friendly mobile app where the photographers and the artists register as freelancers and the customers hire them according to their needs. We used flutter to develop this application which is cross-platform framework which helps to develop both Android and IOS application using one codebase.

About the Authors

Dr. Ajmeera Kiran working as Assistant Professor, Computer Science and Engineering Department at MLR Institute of Technology, Hyderabad, India. He received the B.E. degree in Computer Science and Engineering from Vasaavi College of Engineering affiliated to Osmania University, Hyderabad in 2012. In 2014, received the M.Tech degree in Computer Science and Engineering from Jawaharlal Nehru Technological University, Hyderabad. In 2021, received the Ph.D. degree in Faculty of Computer Science & Engineering from JNTU, Hyderabad, Telangana, India. He has 2 year experience in teaching and 6.5 years in research, he published around 33 publications in International/National journals and conferences. Seven Patents in data mining and big data analytics. Research interest includes data mining, Information Security, Network Security, Big data Analytics and Machine Learning.

Dr. T. Bhaskar, working as Associate Professor in the Department of CSE (AI & ML), CMR College of Engineering & Technology, Hyderabad. He completed his Ph.D. (Full-Time) from JNT University Hyderabad in 2020. He received B.Tech. & M.Tech. Degrees in Computer Science and Engineering from ATRI and REC colleges, affiliated to JNTU Hyderabad, in 2004 and 2009. He has 12 years of teaching experience and 5 years of research experience. To his credit, he has 15 publications, 2 patents and 3 books. His research interests include image and video quality Assessment, watermarking, Data Hiding, privacy and information security etc.

Dr. Manyam Thaile working as Associate Professor, Department of CSE(AI&ML) at Malla Reddy Engineering College, Hyderabad, Telangana, India. He received the B.Tech degree in Computer Science and Engineering from ST.Martin's Engineering College affiliated to Jawaharlal Nehru Technological University, Hyderabad in 2009. In 2012, received the M.Tech degree in Computer Science from University of Hyderabad, Hyderabad. In 2021, received the Ph.D. degree in Faculty of Computer Science & Engineering from JNTU, Hyderabad, Telangana, India. He has 5 year experience in teaching and 6 years in research, he published around 10 publications in International/National journals and conferences. Research interest includes Information Security, Network Security, Sensor Networks and Machine Learning.

Dr. B. Ben Sujitha, B.E., M.Tech, Ph.D. – Principal of Good Shepherd College of Engineering and Technology. She received her Doctoral degree from Anna University, Chennai and has worked at many reputed institutions. She has published more than 30 papers in reputed journals and presented ungreen papers in national and international conferences on various topics. She has received the 'Best Motivator Award' and the 'Best Faculty Award' from South Asian EXPO. She has published 6 technical books and 5 patents. She has been nominated as reviewer for various reputed journals. She is the life member of Indian Society for Technical Education. She has organized FDP/Workshops/Conferences, project EXPO and delivered lectures as resource person in the FDP's and seminars. She is interested in developing personality skills among the students by encouraging a number of co-curricular and extra-curricular activities and motivates all the students in organizing innovative programmes. She has the good vision for the development of the students and the institution. She has been a passionate and caring teacher and an efficient administrator. She has a perfect blend of energy, enthusiasm and knowledge to guide the students and to lead the faculty with mission to achieve the educational goals.

About the Authors

Dr. Manyam Thaile working as Associate Professor in the Department of Computer Science and Engineering (Artificial Intelligence and Machine Learning) of Malla Reddy Engineering College, Secunderabad, Telangana, India. He received the B.Tech degree in Computer Science and Engineering from ST.Martin's Engineering College affiliated to Jawaharlal Nehru Technological University, Hyderabad in 2009. In 2012, received the M.Tech degree in Computer Science from University of Hyderabad, Hyderabad. In 2021, received the Ph.D. degree in Faculty of Computer Science & Engineering from JNTU, Hyderabad, Telangana, India. He has 7 years experience in teaching and 6 years in research, he published around 10 publications in International/National journals and conferences and also published one book. Research interest includes Security, Sensor Networks and Machine Learning.

Dr. V. Neelima, Associate Professor in the Department of Computer Science & Engineering at Jyothibhargavi Institute of Technology and Science Karimnagar, Telangana State, India. Received Ph.D. in Computer Science and Engineering from Jawaharlal Nehru Technological University Hyderabad (JNTU) in 2020 in the area of Security for Wireless Sensor Networks, M.Tech in Computer Science and Engineering from Sriji Reddy Engineering College for Women affiliated to Jawaharlal Nehru Technological University, Hyderabad (JNTU) in 2004, member of several National and International Professional Bodies – member of IAENG, USA, member of International Computer Science and Engineering Society (ICSE). She has 17 years of teaching experience and has published around 10 publications in International/National journals and conferences. Her Research Interest include swarm intelligence based efficient routing in wireless sensor networks, energy balancing & cooperation in WSN, multi aware routing and security aspects of wireless sensor networks.

Dr. Raghunadh Pasunuri working as Associate Professor, CSE-AI & ML Department at Malla Reddy Engineering College, Hyderabad, Telangana, India. He received the B.Tech degree in Computer Science and Engineering from Vaagdevi College of Engineering, affiliated to Jawaharlal Nehru Technological University, Hyderabad in 2008. He obtained the M.Tech degree in Computer Science & Engineering from Jayaram Institute of Technology & Science, affiliated to Jawaharlal Nehru Technological University, Hyderabad in 2009. In 2020, he received the Ph.D. degree in Computer Science from School of Computer & Information Sciences, University of Hyderabad (Central University), Hyderabad, Telangana, India. He has more than 14 years experience in teaching and research, worked as Project Fellow in DRDO for 18 months. He has published more than 10 research papers in various International/National journals and reputed Conferences. His research interest includes Machine Learning, Dimensionality Reduction, Meta Learning & Nearest Neighbor Search.

Dr. Ajmeera Kiran working as Assistant Professor, Computer Science and Engineering Department at MLR Institute of Technology, Hyderabad, Telangana, India. He received the B.E degree in Computer Science and Engineering from Vasaavi College of Engineering affiliated to Osmania University, Hyderabad in 2012. Programming, data structures and algorithms" by LAMBERT international publications

The contents of this book are tailored to align with the syllabus outlined for GATE-2024. From the fundamentals of Programming in Python to delving into essential Data Structures like stacks, queues, linked lists, trees, and hash tables, the book guides you through a comprehensive exploration. Furthermore, it navigates you through key Search algorithms such as linear search and binary search, essential sorting algorithms including selection sort, bubble sort, and insertion sort, as well as advanced techniques like divide and conquer using mergesort and quicksort. The introduction to graph theory and subsequent coverage of basic graph algorithms, such as traversals and shortest path algorithms, further enrich your understanding of the subject matter.
