SUMMARY

Graphic Designing - II (Corel draw & Indesign)

CorelDraw is a vector graphics editing software application. Vector graphics, on the other hand, are produced using graphics programmes and are composed of objects. Each item may be modified independently, which allows for the modification of its form, colour, size, and location. CorelDraw, stylized CorelDRAW, was developed by Ottawa-based software firm Corel. It enables users to do tasks such as adding special effects such as borders to pictures, as well as contrast correction, colour balance, and more. One of the software's advantageous characteristics is its ability to operate with many levels and pages.

InDesign is a desktop publishing software application for creating flyers, brochures, magazines, newspapers, and books. Projects created using InDesign can be shared in both digital and print formats. InDesign is used by graphic designers, artists, publishers, and marketing professionals. It is developed and produced by Adobe Systems and is available individually, or as part of the Adobe Creative Cloud. InDesign was previously available as part of the Creative Suite.
