SUMMARY REPORT

Value Added course name: ArcGIS AND QGIS

Value Added Course Instructor: Dr. C. Krishna Raju

ArcGIS has broken more hearts than anyone for consuming data. QGIS has the edge for consuming data. QGIS is versatile. It's cutting edge when it comes to consuming data. GIS uses the GDAL/OGR library to read and write GIS data. GIS uses the GDAL/OGR library to read and write GIS data formats. Over 70 vector formats are supported. QGIS was born to work with PostGIS. But the list goes on for GIS format consumption shape file, geodatabase, MapInfo formats, Micro station file formats, AutoCAD DXF ta formats. These applications help many manage their raster, vector, and GIS data. They give basic preview functions but the focus is on data access and organization. Both the QGIS Browser and Arc Catalog help to easily navigate in your file system and manage geo data QGIS has support for 2,700 known coordinate reference systems (CRS). It allows you to define global and project-wide CRS for layers without a pre-defined CRS. It also allows you to define custom CRS and supports on-the-fly projection of vector and raster layers. Both ArcGIS and QGIS handle CRS in a user-friendly way. Issues have arisen with PRJ in QGIS. But that's a thing of the past. ArcGIS has a very good geo processing framework. Very solid. Very extensive. But your license level determines which tools you can use in ArcGIS. A basic license still gives you access to a large number of powerful tools. An advanced license gives you access to everything.

Whether it's simple math (map algebra and conditional toolset), statistics (multivariate, neighbourhood, or zonal statistics), or generating value surfaces (interpolation, density, or overlays), ArcGIS raster-based tools are rock-solid. The Spatial Analysis tools also offer specialized tools for groundwater, hydrology, and solar radiation. Other options are to filter (reclass or extraction toolsets) or simplify data (generalization toolset). In QGIS, the raster calculator tool performs map algebra with a little less math and trigonometry functions. QGIS has multiple ways to perform interpolation. Ordinary and universal kriging are separate tools in QGIS, but in ArcGIS it's a radio button under the kriging tool. GRASS r. cost is for cost surfaces. QGIS wins for more filtering options.
