(57) Abstract :

7. ABSTRACT A system to detect the rainfall and alerts comprises of a NPN transistor, a battery, a plurality of sensors, a buzzer and a switch. The said sensor is placed in open space for the contact of rainfall. The said sensor is connected with the battery for the power supply and the said sensor is connected with NPN transistor for sensing the analog signal. The said analog signals are converted into digital and sent to buzzer. The said buzzer after receiving the signal starts to alert and the switch is used to stop the buzzer after alerting. Figure associated with Abstract is Fig. 1.
