(57) Abstract :

7. ABSTRACT A system (1) for providing ventilation layout unit inside the underground mine is disclosed wherein the said system (1) comprises of a plurality of man way inclines (2) for intake of air inside the mine. A blower unit (3) for providing air intake on a surface. Then creating a ventilation network unit (3) by introducing stoppings for creating air inside the workings (4). The system further comprises of an exhaust unit(6) for recovering harmful gases produced in the said mine and returning of said air comprising harmful gasses is possible by arranging an ventilation shaft inside the mine(6). The said system (1) could provide natural air into the mine (5) and dilutes the existed gasses inside the mine. The said system (1) could maintain hygienic temperature inside the mine. The Figure associated with the Abstract is Fig 1.
